

## FARM TOURS AT TRUE BLUE MARRON

Marron are the world's third largest freshwater crayfish, and the largest farmed crayfish. They are indigenous to the south west region and can be found in some of the most prestigious restaurants around the world.

They are well known for their sweet, delicate meat. Marron also make a unique aquarium pet.

True Blue Marron is a family owned farm set in the heart of Nannup's beautiful natural forest. Our farm is fed by natural spring water and provides a beautiful backdrop for guests to encounter a truly different experience.

At True Blue Marron, we farm both black (standard) marron, and the amazing cobalt blue marron, which must be seen to be believed.

During the interactive information session, visitors will learn about marron growing, witness some of the practises employed at the farm and see live blue and black marron. We end the tour with a wander around the many marron ponds, a taste of delicious West Australian marron and some lessons on how to cook this local delicacy.

Farm tours are available by arrangement only. Contact us at [info@truebluemarron.com.au](mailto:info@truebluemarron.com.au) to find out more.
